Babelverse is the first solution for on-demand interpretation (real time translation of spoken communication) in any language by remote native speakers or professional interpreters. We're solving the bloody challenging problem of language barriers, with an approach that brings great social impact.

Babelverse has become an award winning start-up at LeWeb, The Next Web, TechCrunch Disrupt, and more, with great momentum and awareness globally.

CNBC said it best in their article "The \$34 Billion Multilingual Business Conversation" (<http://www.cnbc.com/id/100765497>):

"Like many other rapidly growing, venture-backed Silicon Valley tech start-ups, Babelverse was born to address a universal problem. But Babelverse's universal problem is also a global one: dismantling communication barriers by enabling anyone in the world—tourist, tenant, corporate marketer—to access on-the-spot interpretation from any language and translation into another one."

</> www.btcpoint.com

🐦 twitter.com/btcpoint

f www.facebook.com/btcpoint

We've developed a plug-in API and a Mobile App to enable individuals around the world to buy Bitcoin using cash and sell Bitcoin for cash with instant withdrawals at any participating ATM without the need of an ATM card or bank account.

Five years from now we see our business as the #1 global Bitcoin ATM network operating in many different countries and working with different Banks. Once we are operating in different countries around the world we want to become the platform that individuals use to send and receive cash instantly across borders.

To access the service, BTCPoint users enter the amount they'd like to withdraw from an ATM or the amount of Bitcoin they'd like to buy using the application.

When users Buy Bitcoin:

1. Enter Bitcoin address and Mobile Phone
2. Wire the funds to a company Bank account
3. Get Bitcoin

When users Sell Bitcoin:

1. Send Bitcoin to a company address
2. Receive an SMS with a PIN Code
3. Input the PIN Code into an affiliated ATM
4. Withdraw funds

carbon checkout

Chile

</> www.carboncheckout.com

🐦 twitter.com/carboncheckout

f www.facebook.com/carboncheckout

The Carbon Checkout plug-in integrates seamlessly into ecommerce shopping cart platforms to offer consumers the unique opportunity to offset the carbon impact of their purchase at checkout.

Consumers can choose to round up their purchase, or they can select a preset dollar amount for a larger carbon offset contribution. We pool these micro-contributions into a larger fund to make significant investments in zero emission renewable energy and carbon sequestration projects.

We are positioned as a carbon offset retail aggregator; we buy offsets from project developers at wholesale prices, and sell to consumers through traditional ecommerce channels at retail prices. For every \$1 in sales, we realize a gross margin of 61 cents.

The current carbon offset market is valued at approximately 200 billion dollars, but individual consumers are not yet fully engaged and represent a mere 1.9% of the market. Even so, the offset market is one of the fastest growing in the world with a forecasted value of 1 trillion dollars by 2020.

We see great opportunities in 2015 and beyond to create low cost access to this rapidly expanding market.

Eyetok is a mobile video live-streaming app.

Eyetok let's you discover and share a live world through your smartphone.

Broadcast or watch live the world through other people's mobile devices video streams, as if they were your eyes.

Explore life, live, like you've never seen it before!

How often have we ever wondered "I wish I could be there and see it with my own eyes"? How many times have we ever wished to see what is happening right now in a specific location nearby or on the other side of the world?

How often have we told someone "Watch it yourself" or "Wish you were here"? How many times have we dream tv to share what we are seeing with others?

Any gig, sports event, breaking news, demonstration, weather, traffic jam, something out of the ordinary or ephemeral... We can now see or share everything that happens in the world right now, live, as if we were right there, through anyone's eyes. Life, live, streamed.

Unmanned Aerial Vehicles(UAV), also known as drones, save around 75% costs from previous solutions. That is why, in the last 6 years their use has fourfold creating a market of 6.000 M\$ revenue in 2013 and it is foreseen that it will double in 10 years.

However, this technology is still complex to use to the final user. On one hand, they need infrastructure to operate planes (runway, catapult, net) meaning more cost and less portability.

On the other hand, user has to deal with half range and endurance of planes while operating helicopters/multirotors. We are developing the project QPCA, an aircraft that hybridizes planes and helicopter/multirotor to solve the previous problems.

Nowadays we are flying succesfully the first prototype of 5 kg thanks to a grant from theSpanish Ministry of Defense. Our idea is to commercialize this aircraft and escalate it in next projects (20 kg, 150 kg, 1500 kg) in order to develop a 4 passenger aircraft.

Carlos Matilla Codesal

Co-founder

hermosura ind.

Spain

Hermosura Industries is a game development Studio, focused on digital distribution for next gen and current gen consoles, that develops franchises to be sold to video game publishers.

Console video games software revenue 27 billion \$ globally in 2014 (for an audience of 219 million), with 2.4 billions \$ being made by digital distribution.

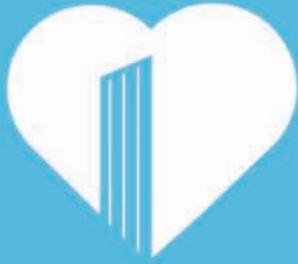

Given the current shift in both value and distribution chain (users habits moving towards online purchase) it is expected by 2018 that 43% of the consoles games sold worldwide will be distributed digitally - representing approx. 14 billion \$ (sources: Gartner, Superdata, EEDAR). This, added to a clear publisher trend to finance external studios to dynamize their portfolio (due to increasing internal developing costs and the consequent risks in hitting release dates) creates a perfect window of opportunity for a studio with the right business approach.

The company has a committed team with world class experience, great track record and strong execution capacities with a close network within our clients ranks.

homeswipe

USA

</> www.homeswipe.com

🐦 twitter.com/homeswipe

f www.facebook.com/homeswipe

HomeSwipe is a mobile first real estate platform that enables renters to search for apartments using a card swipe interface, making their search significantly easier and more enjoyable.

Real estate agents benefit from the mobile first approach as no incumbent has been able to offer any kind of actionable analytics aside from page views. HomeSwipe takes the copious amounts of data in real estate and removes the “analysis paralysis” it induces. Renters can now easily digest and engage both apartments and agents.

A unique in-app messaging feature allows for the renters and agents to communicate instantly, saving time and adding efficiency to the process.

Our unique apartment review process and user experience are extremely easy to use. By using a Tinder-esque card-swipe interface, we make it tremendously easy to find an apartment.

We're mobile-first and our clean database ensures a smooth experience, from search to sign.

</> www.ludei.com

🐦 twitter.com/ludei

f www.facebook.com/ludei

Based in San Francisco, CA, Ludei's Cocoon platform is changing the way people develop apps all over the world. Every company needs a website, an iOS app, an Android app, at least, which implies having three teams, one for each target platform. We believe now only the web team is needed, as we can "convert" the mobile website into a final native app for iOS, Android or Windows Phone. One team, one development, 3-4 platforms, with only one fraction of the cost.

Millions of developers all over the world are our target.

Ludei has a unique technology to run the web/HTML5 faster on mobile devices, which is key. Our technology is being used today by Fortune 500 companies such as Disney or Viacom (Nickelodeon), and by Chinese #3 browser, Maxthon, among other 50,000+ users.

We are changing the world of app development, making everything easier, faster and cheaper.

Ludei's founder is Eneko Knorr, a serial entrepreneur who started a web hosting company, Hostalia, that became the 4th largest in Spain and was acquired by Acens/Telefonica.

</> www.packagepeer.com

🐦 twitter.com/packagepeer

f www.facebook.com/packagepeer

PackagePeer applies the collaborative economy model to solve this last mile global e-commerce logistics problem.

PackagePeer is a network which allows online buyers to search their neighborhood for private individuals (“packagepeers”) who volunteer to take delivery of purchased goods in their name for a small fee. Once the contact is made and found suitable, the User can access the “packagepeer’s” details to use them as the delivery address when purchasing online.

Online shoppers can then pick up their goods from neighbor’s homes at their most convenient time.

In brief, PackagePeer allows individuals to organize themselves to create and manage micro delivery hubs which are more readily available than private addresses while maintaining the urban capillarity convenient for the end user.

Global e-commerce is booming. In 2012, 6.5% of US retail purchases were made online and it is forecasted to triple by 2025, increasing up to 20% of total retail sales.

plataforma saúde

Brazil

</> www.plataformasaude.net.br

🐦 twitter.com/PlataformaSaud

Plataforma Saúde is a social impact business that uses mobile technologies to provide access to quality healthcare for underserved communities.

Our preventive and healthcare educational approach shifts the focus from illness to wellness.

We act very early in the healthcare chain to identify the patient's degree of risk of Non Communicable Diseases, the major cause of deaths in the world.

We use mobile diagnostic equipment to give our users access to fast, inexpensive and high- quality reliable exams.

A set of 15 exams cost only R\$20 Brazilian reais (less than \$7 USD) and the results are delivered to the user in only 20 minutes. Our award-winning methodology is based on traffic light colors, where green means okay for a particular indicator and red requires special attention, for example. On a system based on colors, even the illiterate can identify how their health situation is.

Besides the results printed out, the information is also saved in the cloud so that users can have access to it later. Our system is also being built for integration into other public and private healthcare systems, which will enable doctors and other healthcare professionals to have access to more information on their patients and make better decisions.

poapower

Kenya

</> www.poapower.co.ke

PoaPower provides, on a pay-as-you-go basis, abundant clean and affordable energy as a utility to off-grid, low income consumers in developing countries. We reduce poverty, protect the environment and generate employment, whilst building a profitable business.

PoaPower has developed and field-tested an innovative Home Power Station system that provides a grid-like experience. It is provided on a metered 'pay-as-you-go' (PAYG), prepaid basis, and leapfrogs existing solutions, in size, functionality and affordability.

In Kenya alone, 6 million mainly rural households (70% of the population) lack access to electricity because the grid does not extend to their homes.

For most, solar home systems are too expensive to buy upfront. Portable solar lamps, some of which are offered on a payment plan, are useful to a degree.

However, what people truly aspire to is the convenience and abundance of power provided by a connection to the grid.

Adriaan Mol

CTO

pulpcar

Spain

Pulpcar is an online platform that connects buyers and sellers in an organized, efficient and safe environment. We are a complete end-to-end marketplace where we put our customers satisfaction a the core of the value proposition taking everything in charge.

We perform an exhaustive inspection of the car to be sold, and if it is certified by our specialists, it is made available to buyers through the website with a wonderful price and a complete series of selling pioints advantages for them to take their decision with peace of mind.

Pulpcar is a disruptive business willing to resuscitate the used car business where the experience for both sellers and buyers is full of pain points, driven by asymmetrical information, lack of confidence, absence of guarantee, fear of scams and bad purchase decisions ; in addition to the hassle of producing the ad, bothering with phone calls and meetings and then haggling and handling all the paperwork.

By producing all those items in our USP, we allow the buyer to purchase in confidence, avoiding hassles and without the test drive or even eventually seing the car.

By doing that, we squeeze intermediaries, we reduce costs so we can add price competition marks to both buyers and sellers, while delivering scalable profitability to the business.

Imagine Youtube, Facebook and Shazam in one single spot online... Voilà! It's Slashtag!

Slashtag is a platform combining an online TV, a social network and an audio recognition technology. A platform aiming at Millennials, 75% of the future global workforce by 2025, which is becoming the major stake especially for brands, producers and TV channels. More than studying them, it is also because we ourselves are Millennials.

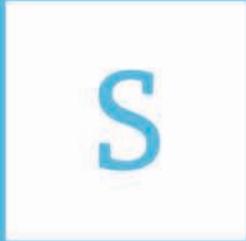

So this platform is going to be the favorite Millennials' website and the leader on tomorrow's television market online.

In 2015, people combine watching and sharing at the same time. To respond to this, our product combines an online TV and a social network.

On Slashtag, it is possible to watch 4 types of contents (Show, Music, Fiction, 360), all of them being interactive thanks to our technology. Viewers therefore have the possibility to know more about the content, geolocate and even buy what you see on the screen and instantly share it on social networks.

catFi/zillians

Taiwan

</> www.zillians.com

🐦 twitter.com/zillians

f www.facebook.com/zillians

Our vision is to build "smart things" around pets and create new business models that disrupt the entire pet industry and to also save millions of cats and dogs from preventable death.

We unveiled our first product CatFi (before called Bistro) on Indiegogo last July, which is a smart cat feeder with cat facial recognition technology to answer a simple question: what's the appetite and weight changes for each of my beloved cats? Most feline diseases can be identified by a change in appetite and weight but they are difficult for pet owners to recognize.

We learned the fact in a hard way from our personal experiences so we worked with veterinarians to build CatFi to really solve the problem.

The idea went viral on the very first day of our campaign launch, and there're more than 200 global medias reported us including Time, Wired, Engadget, and many others.

However we are not just building the smart feeder as a pet gadget to collect revenue from hardware sales. We build recurring business model around that.

The very first thing we do is the referral pet food sales (the largest segment of pet industry) because we know the exact pet food your cats are taking and we know when they are going to run out of food, so we can make sales referral in advance.
